

BCharity is a revolutionary charity exchange based on blockchain technology. The first of its kind, this unique platform has been specifically designed to increase the accessibility and efficiency of charity across world.

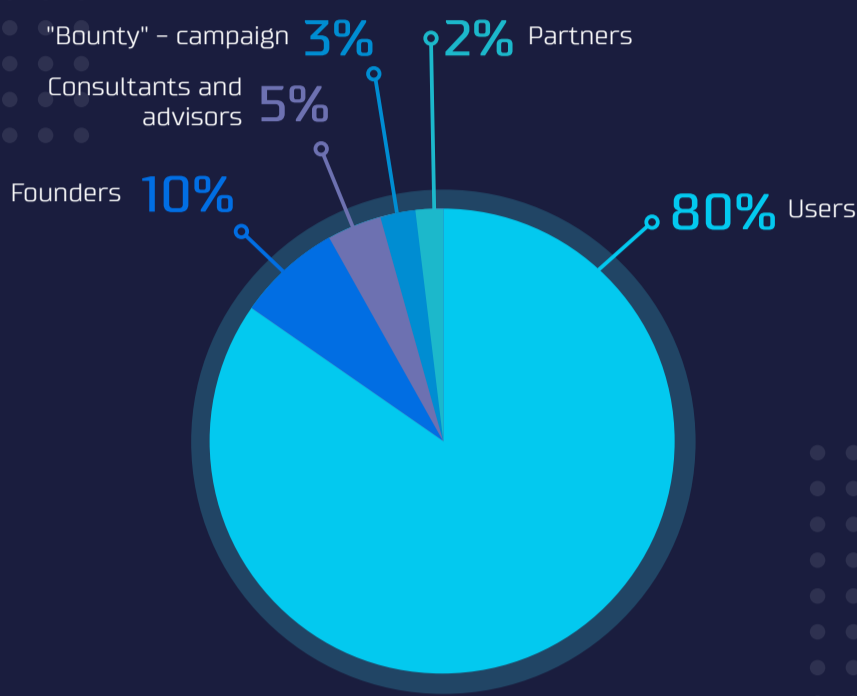

Working together the **BCharity** team has designed a technologically sophisticated, easy-to-use, large-scale platform that will help to change the world for the better. **BCharity** will open new opportunities in the field of charity, by facilitating philanthropic donations via digital currencies and increasing charitable activity without borders.

The platform will unite all who participate in the charity eco-system. On the one hand, there are charitable foundations and organizations all over the world; on the other, there are individuals who provide direct help to those in need.

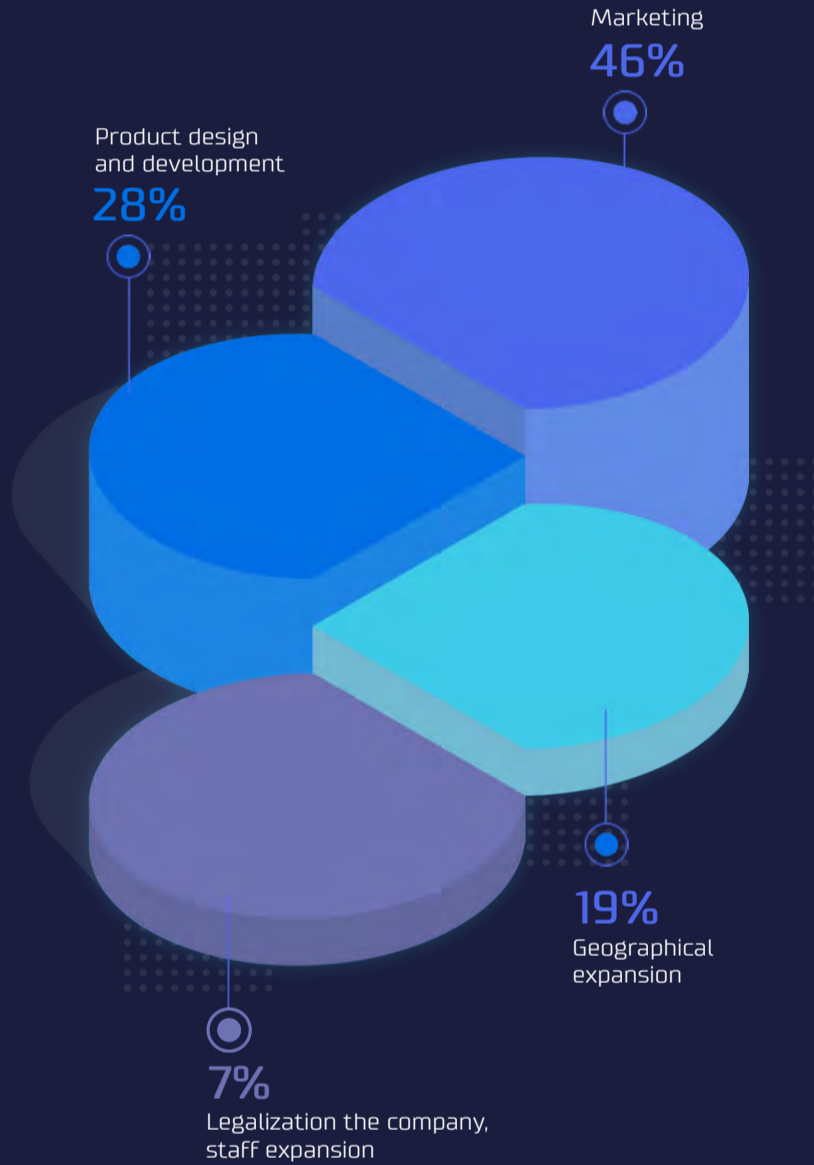

The implementation of blockchain technology opens up the possibility of decentralization within the sphere of charity. Decentralization will transform the modern systems of charity, removing unnecessary activity, barriers and regulators that decrease the effectiveness of charitable foundations and organizations, while evolving global charity to a qualitative new level. Smart contracts will change the traditional methods of charity, while revolutionizing the effectiveness of philanthropy.

The capitalization of the modern charity market is already less than the capitalization of digital currencies. The implementation of the blockchain and cryptocurrency technologies will accelerate the evolution of charitable donations and increase the scope of available financial resources and wealth through this growing asset class.

THE DISTRIBUTION OF TOKENS:

DISTRIBUTION OF FUNDS

OUR FEATURES

BCharity is a modern and unique international charity exchange, which is based on advanced technologies.

BLOCKCHAIN

The blockchain technology and cryptocurrency especially bring up a huge potential for "unbreakable trust and fully transparent" donations. The blockchain makes it possible to instantly receive financial assistance where ever it is needed and without intermediaries. The adoption of blockchain technology does not necessarily need to remove payment anonymity, or donation history.

CRYPTOCURRENCY

Cryptocurrency is not related to governments, banks or other financial institutions and can not be withdrawn or held during the transfer, while ensuring the transaction. The transfer of the funds happens instantaneously, with a minimum fee to help those in need, anywhere in the world.

LARGE-SCALE AND AVAILABILITY

The international charity exchange will provide a blockchain solution to charitable foundations and organizations and increase the effectiveness of donations around the world. This will accelerate the process of fundraising and increase the chances to collect the necessary funds in time. Only officially registered organizations, verified according to the required package of documents, will have access to the platform and the ability to receive charitable donations.

TEAM FOUNDERS

Vladislav Kolodistyy
CEO and Founder

BCharity Team Lead, a visionary of technology with the genuine desire to modernize charity.

Roman Prishchip
Head Developer & Co-Founder

A professional in the field of technical development of web resources with years of experience. Wide experience in Ruby, JavaScript and Erlang programming languages.
